Description

Description:

When a user adds more than 10 items to their shopping cart, the "Proceed to Payment" button fails to initiate the checkout routing. Clicking the button produces no UI response, preventing the user from completing the purchase.

Environment:

- OS: Windows 11
- Browser: Google Chrome (Version 117.0)
- URL: www.e-commerce-storefront-qa.com/cart

Steps to Reproduce:

- Navigate to the storefront homepage.
- Add any 11 distinct items to the shopping cart.
- Click on the Cart icon in the top right corner.
- Scroll to the bottom of the order summary.
- Click the "Proceed to Payment" button.

Expected Result:

The system should route the user to the `/checkout/payment` secure gateway to enter credit card details.

Actual Result:

The button remains unresponsive. Inspecting the browser console reveals a `500 Internal Server Error` related to the API payload size.

Severity: High (Blocks critical user path/revenue generation)

Priority: High (Requires immediate developer attention)

Comments

Comment by Viinesh Kerisnan [13/Sep/26]
Investigating this now. It looks like the payment API is timing out when the JSON payload for the cart array exceeds a certain character limit. Working on a patch.
Comment by Viinesh Kerisnan [13/Sep/26]
Patch deployed to the staging environment. The API payload limit has been increased and pagination was added to the cart array. Please retest.
Comment by Viinesh Kerisnan [13/Sep/26]
Retested in the staging environment using Chrome v117. Added 15 items to the cart and the 'Proceed to Payment' button successfully routed to the <code>/checkout/payment</code> gateway. No 500 errors in the console. Bug is resolved.
